

# Colostrum<sup>®</sup> Liquid

Probiotic additive presented in liquid form for use by spray in the hatchery with the objective of early colonization and by drinking water at any age of the chickens for recolonization and/or maintenance of the intestinal microbiota.

## ⚡ ACTION

Colostrum<sup>®</sup> Liquid promotes the intestinal colonization and/or recolonization with bacteria of cecal origin of adult SPF chickens, which will be important for control of enterobacteria (paratyphoid salmonella strains, *E. coli* - APEC) and *Clostridium perfringens*, the causing agent of necrotic enteritis.

## 🎯 EFFICACY

- Modulation of the intestinal microbiota, favoring eubiosis;
- It contributes for better livestock indexes;
- Control of enterobacteria (paratyphoid salmonella bacteria, *E. coli* - APEC) and *Clostridium perfringens*, the causing agent of necrotic enteritis;
- Intestinal recolonization after treatment with antimicrobial agents.

## 🔗 COMPOSITION

Unspecified culture of microorganisms (CBMAI 1064).

## 📦 ADVANTAGES

- Hundreds of strains of probiotic bacteria that colonize all intestinal segments (small intestine and caeca);
- Early intestinal colonization;
- Excellent cost benefit;
- Reduction of use of antimicrobials;
- Certification of absence of pathogens.

## 📏 DOSE

- **By spray:** broiler breeder and layer hens 5,000 doses/vial; broilers 10,000 doses/vial;
- **By drinking water:** broiler breeder and layer hens 5,000 doses/vial; broilers 10,000 doses/vial.

## 🧴 PRESENTATION

- Vials containing 50 ml.
