

Colostrum[®] Plus

Probiotic additive presented in the form of mini pellet, indicated as first feed, for chickens on the first day of life. It contains probiotic microorganisms and mannan oligosaccharides that contribute to the early intestinal colonization.

Colostrum[®] Plus

Hatchery: supply directly in chick shipping box;
Farms: supply as first feed at the time of housing.

⚡ ACTION

Colostrum[®] Plus promotes the early intestinal colonization with bacteria of cecal origin of adult SPF chickens, which will be important for control of enterobacteria (paratyphoid *Salmonella* strains, *E. coli* - APEC) and *Clostridium perfringens*, the causing agent of necrotic enteritis.

🎯 EFFICACY

- Modulation of the intestinal microbiota, favoring eubiosis;
- It contributes for better livestock indexes;
- Control of enterobacteria (paratyphoid *Salmonella* bacteria, *E. coli* - APEC) and *Clostridium perfringens*, the causing agent of necrotic enteritis.

🔗 COMPOSITION

Unspecified culture of microorganisms (CBMAI 1064);

Silicon dioxide;

Yeast cell wall;

Skimmed milk powder;

Ground whole corn;

Soybean meal;

Wheat flour;

Milk serum powder;

Kaolin.

📦 ADVANTAGES

- Hundreds of strains of probiotic bacteria that colonize all intestinal segments (small intestine and caeca);
- High quality mini pellet;
- Early intestinal colonization;
- Excellent cost benefit;
- Reduction of use of antimicrobials;
- Certification of absence of pathogens.

🔑 DOSE

- **Broiler breeders and layer hens:** 2 g/chick;
- **Broilers:** 1 g/chick.

📦 PRESENTATION

- Plastic bag containing 10 kg.
